

Analysis

International mathematical journal of analysis and its applications

The journal *Analysis* is devoted to the field of mathematical analysis, in particular classical analysis and its applications, including real and complex analysis, differential geometry, ordinary and partial differential equations, analytic number theory as well as numerical analysis.

Applications in physics, biology, engineering and economics e.g. shall also be considered.

Statistics & Decisions

International journal for statistical theory and related fields

The purpose of *Statistics and Decisions* is to provide a forum for contributions to statistical theory and related fields. In selecting papers for publications, the editors focus on high mathematical standards, scientific innovation, importance and clarity of presentation.

The scope of subjects is interpreted in a broad sense and includes any developments in current research related to stochastics and statistical methods, models and concepts of data analysis or decision theory. Mathematical papers on stochastic finance or on the stochastic analysis of algorithms are as welcome as papers on asymptotic statistics, nonparametric statistical inference and statistical analysis of stochastic processes.
